

ABOUT US

Founded in 2003, Altus Engineering (Altus, LLC) is an experienced professional engineering services firm, providing Department of Defense and industry customers with high-quality software development services, system modeling and simulation, scientific research, and performing engineering analysis of combat system and personnel vulnerabilities. With 18 prime contracts awarded to date, our business model and reputation reflect delivery of outstanding professional and technical services to our clients, on time and within budget.

TECHNICAL FOCUS AREAS

Software and Application Development:

- Custom development and maintenance of modeling and simulation tools used to perform survivability, lethality, and vulnerability (SLV) analysis of military systems and personnel equipment.
- Creation and enhancement of web interfaces, databases, and graphical user interfaces.

Engineering Analysis:

- Performance of system engineering and vulnerability studies to support the design, testing, upgrade, and operation of combat systems.
- Development of new assessment and evaluation methodologies for military ground vehicle platforms.

Research and Testing:

- Providing scientific technical expertise in laboratory research and live-fire testing.
- Biomedical and physiological research to support injury modeling activities.
- Physical testing, data collection, and laboratory management.

Why Us?

- Established Small Business with DCAA-approved accounting system, TS FCL.
- Demonstrated successful performance across broad technical areas.
- Proven recruitment, retention and management strategies, with expertise to build teams and solve diverse problems.
